PROJECTS

MILK DISTRIBUTION SYSTEM

Milk Distribution System keeps the record of every transaction and maintains the records of sellers and buyers. This application is for wholesalers who distribute or sell the milk and milk product to their retailers. In this application distributor can generate the daily or monthly reports about the purchase and selling.

Technology / Tools: VB.NET and MS-SQL server

PROCC

PROCC is an online shopping site that allows vendors to sell their products.

Vendors can create the stores and sell the items of that brand. The customers can see the stores, brands, new arrival products, etc. and customers can add the product into the cart and also can order the product from the frontend store. The product's order would sync with the backend. My responsibility was to ensure the displaying of stores, store policies, categories, products, product details and size charts, etc. for the Vue storefront.

Technology / Tools: Vue (Vue Storefront), Magento2, Node.js, MongoDB

Employee Management System

Employee information is added to EMS when a new employee joins the organization. Employee Roles can be one of Admin & Employee. The Dashboard displays different data depending on the Role of Employee. Employee attendance is tracked from the Timesheet section. Different reports regarding attendance can be seen from the Timesheet section. Admin can also add / edit / delete attendance of other employees. Employees can apply for leaves, check their leave balance, approve team members' leave applications (for Managers), and see a few reports related to Leaves depending on their Roles. Information related to the entire Company, viz. policies, holidays, organization structure etc. can be seen and edited depending on the Employee Role in the Company section. Payroll section can be accessed only by Admin role.

Technology / Tools: CodeIgniter, html, mysql, jQuery

Interview Management System

Interview management is maintaining the interview process. The admin can schedule the interview for the candidate. Admin can add the candidate and users which is called as interviewer admin can also track the interview status. The interviewer can give feedback about the interview and rating. Different reports are regarding interview and candidate. admin can receive the day summary of the interview via mail

Technology / Tools: CodeIgniter, html, mysql, jQuery
